EDUCATION

Rutgers University, School of Arts & Sciences GPA: 3.75/4.00

Bachelor of Science in Computer Science

Honors: Dean's List (Fall 2023, Fall 2024, Spring 2025, Fall 2025, Spring 2026)

New Brunswick, New Jersey

EXPERIENCE

Astro Intelligence Labs

July 2023 – Present

Cloud Engineer

Houston, Texas

- Designed and operated multi-environment Azure infrastructure using VNets, NSGs, VPN Gateway, and Key Vault; enforced zero-trust networking and identity security with Entra ID, RBAC, MFA, and Managed Identities.
- Reduced cloud compute costs by **25%** via automated VM scheduling and rightsizing using Azure Automation runbooks, Azure CLI, and cost governance dashboards.
- Built and maintained reusable **Terraform** and Bicep IaC modules across **4 environments**; automated deployments through **GitHub Actions** CI/CD pipelines for consistent, drift-free infrastructure delivery.
- Engineered Azure Virtual Desktop (AVD) platform serving **100+ users**, tuning autoscale policies and FSLogix profiles to achieve **99.9%** session reliability.
- Built observability pipelines with Azure Monitor, Log Analytics (**KQL**), and Prometheus-compatible metrics across **80+ resources**; identified and decommissioned 10+ underutilized assets, cutting waste.
- Containerized and deployed microservices using **Docker** and **Kubernetes (AKS)**; integrated **Helm** charts and GitOps workflows for automated, reproducible rollouts.
- Developed event-driven automation using Logic Apps, **Azure Service Bus**, and Event Grid; reduced manual operational toil by **40%** through runbook-driven incident response.
- Integrated Azure OpenAI workloads with private endpoints, RBAC, and cost controls; implemented disaster recovery using **Azure Site Recovery** with documented RTO/RPO targets.

Chief Technology Group

June 2021 – June 2023

Cloud Solutions Engineer

Cypress, Texas

- Provisioned and maintained Azure and Citrix infrastructure, supporting enterprise-scale virtualized environments and hybrid cloud connectivity.
- Automated VM provisioning and baseline configuration using **PowerShell DSC**, reducing deployment time by **60%**.
- Strengthened IAM posture by auditing and refining RBAC assignments across **2 Azure tenants with 100+ role assignments**.
- Supported hybrid networking configurations including VPN routing, NSGs, and firewall rules to maintain secure remote access.
- Monitored infrastructure health across 20+ systems using Azure Monitor and Citrix Director, improving reliability and operational visibility.
- Resolved infrastructure and session-level issues with an **85% first-contact resolution rate**, documenting repeatable solutions for team use.
- Managed VMware vSphere resources including templates, snapshots, and resource allocation for optimized performance and availability.

PROJECTS

Platform Control Room — Self-Service Cloud Platform Engineering Portal

April 2026 – Present

- Built a full-stack internal developer platform using Next.js, TypeScript, FastAPI, SQLAlchemy, SQLite/Postgres, Docker, Vercel, and Neon to automate cloud workload onboarding through a self-service portal.
- Implemented **20+ REST API routes** that generate Terraform tfvars, Helm values, Kubernetes manifests, ArgoCD Application files, and Azure deployment pipeline artifacts, converting manual platform setup into repeatable GitOps and CI/CD workflows.
- Added Azure Connector Lite with Entra ID app registration, GitHub Actions OIDC, Azure Storage Terraform state, Resource Graph reads, Cost Management reads, and Terraform plan validation without running paid AKS infrastructure.
- Built an AI-guided Azure deployment generator using Groq and the GitLab API to collect deployment requirements, generate Terraform/GitLab CI pipelines for resource groups, storage accounts, and Linux VMs, and push generated branches to GitLab.
- Integrated policy-as-code validation, cost estimation, drift detection, seeded demo data, and GitHub Actions workflows for backend, frontend, Terraform, policy, and Azure connector validation.

CloudPulse — Azure Optimization Platform

January 2026 – Present

- Built a cloud optimization platform aggregating Azure Cost Management, Advisor, Monitor Metrics, Resource Graph, and subscription data into actionable insights across environments.
- Developed a **12-endpoint FastAPI backend** integrating 6 Azure services with caching and pagination for scalable, high-volume data processing.
- Designed a Next.js dashboard with anomaly detection, resource insights, findings drill-downs, and reporting for cost and performance optimization.
- Deployed workloads to **Kubernetes using Helm**, enabling scalable deployments, environment isolation, and reproducible infrastructure.
- Implemented secure authentication using Entra ID with MSAL and On-Behalf-Of (OBO) flows, enforcing scoped access and tenant isolation.

TECHNICAL SKILLS

Cloud: Microsoft Azure (VNets, Entra ID, Automation, Azure Monitor, Key Vault), AWS, VMware vSphere/ESXi

Infrastructure as Code: Terraform, Azure Bicep, ARM

DevOps & Platform: GitHub Actions, GitLab CI, CI/CD, Docker, Kubernetes, Helm, ArgoCD, Azure CLI

Security & Networking: RBAC, MFA, Managed Identity, NSGs, VPNs, Azure Firewall, Conditional Access familiarity

Observability: Azure Monitor, Log Analytics (KQL), Metrics, Resource Graph, Cost Management

Languages: Python, PowerShell, Bash, JavaScript, Java, SQL

CERTIFICATIONS

Microsoft Certified: Azure Administrator Associate | AWS Certified Cloud Practitioner | Microsoft Certified: Azure Fundamentals
